**Discuss why a nursing center should be started or not started in your home town.**

Nursing is very essential especially in the management of patients admitted in the hospital with various conditions. Nurses work hand in hand with the physician in ensuring that the patient receives right medical treatment. Nursing center promotes on care of the patient. Establishment of a nursing center in my town means that the town will have nursing services at their disposal. It is therefore important to start a nursing center in my home especially to promote the general health conditions of the patient. Nursing center in the town means faster access to nursing services and medical services which translates to better care of the patient.

**My state's position on credentialing APNs**

My state holds to great extent the crediting of advanced practice nurses. The practice of an advanced care nurse is of great value since it helps in influencing the practice of other nurses. Apart from the nurses, APN influences on the overall delivery of the health care systems as well as the care of the patient. Due to this fact, my State takes regulating of APNs with great interest and caution. This is because as an advanced practice nurse one needs to have advanced knowledge, clinical proficiency as well as be in a position of making independent decisions (De Geest et al., 2008).

My State regards licensing as a way of protecting the public especially from a number of the unsafe practitioners. As an advance practice nurse, the States expects the nurse to work within the scope of nursing. In my State, an advanced clinical nurse practice to the full scope with minimal supervision from medical personnel. Furthermore, apart from being allowed to work on the nursing domain, the law also allows them to extend their responsibility to medicine

domain. Here they are able to write prescriptions as well as admit patients (Mick & Ackerman, 2000).
